*Office Urology* May 29 2020 Although urology is a surgical specialty, it has become apparent that changes in health care delivery and financing have led to an increasing volume of care being provided by urologists in their offices. A major part of the revenue of a urology practice depends on office production and efficient management. To have a successful practice, the productive, committed urologist must have a thorough understanding of the procedures and problems that need to be dealt with in the office. Moreover, the urologist must play an active role in the administration and business aspects of running the office. Surprisingly, very little has been written about the office practice of urology. *Office Urology: The Clinician's Guide* presents a fresh, practical, and concise text book covering the vital issues that the urologist must face on a daily basis in the office. The initial chapters of the textbook cover the critical aspects of managing the urologic office, such as principles of management, marketing the practice, proper billing and coding, advanced information systems, and important legal issues.

The book is not intended to review in detail the academic aspects of the various pathologies pertaining to urology, which have been well covered in several other textbooks. Instead, the clinical chapters deal with practical issues, such as selecting appropriate treatment and counseling patients on the optimal therapy for the problems that the urologist frequently manages. The individual authors have demonstrated expertise in their fields.
