*Bringing together leading theorists,  
researchers and policy makers with expertise  
in using realist methods, this book is a  
definitive guide to putting realist  
methodologies into practice. Not just an*

overview of the field, this book looks to extend current debates and apply realist methods to new and practical challenges in social research. Featuring practical, worked examples of how to turn theory into evidence, it empowers readers not just to understand realist methods, but to use them. It will help readers: - Negotiate the complexity of relational systems - Understand the importance and relevance of cumulative theory - Address concerns over data sources and quality - Be flexible and creative in realist approaches - Produce useful evidence for policy. Sophisticated and globally minded, this book is the perfect addition to the ongoing development and application of realist methods across evaluation, synthesis, and social research. This book presents a collection of works written by military researchers on the human performance research being carried out in the military. • 34 distinguished military researchers have written chapters for this book • Each chapter is followed by a reference list/bibliography This book contains substantially extended and revised versions of the best papers from the 15th International Conference on Enterprise Information Systems, ICEIS 2013, held in

Angers, France, in July 2013. The 29 full and two invited papers included in this volume were carefully reviewed and selected from 321 submissions. They reflect state-of-the-art research focusing mainly on real-world applications and highlight the benefits of information systems and technology for industry and services, thus connecting academia with the world of real enterprises. The topics covered are: databases and information systems integration, artificial intelligence and decision support systems, information systems analysis and specification, software agents and Internet computing, human-computer interaction, and enterprise architecture. This book is the fourth volume in the definitive series, *The History of the Study of Landforms or The Development of Geomorphology*. Volume 1 (1964) dealt with contributions to the field up to 1890. Volume 2 (1973) dealt with the concepts and contributions of William Morris Davis. Volume 3 (1991) covered historical and regional themes during the 'classic' period of geomorphology, between 1980 and 1950. This volume concentrates on studies of geomorphological processes and Quaternary geomorphology, carrying on these themes into

the second part of the twentieth century, since when process-based studies have become so dominant. It is divided into five sections. After chapters dealing with geological controls, there are three sections dealing with process and form: fluvial, glacial and other process domains. The final section covers the mid-century revolution, anticipating the onset of quantitative studies and dating techniques. The volume's objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of contemporary geomorphology. The volume is in part a celebration of the late Professor Richard Chorley, who devised its structure and contributed a chapter. The use of gamma-emitting radionuclides for diagnostic imaging in nuclear medicine has been established for many years. Sophisticated gamma ray detecting camera systems and computer links enable the clinical investigator to image different regions of the body and to quantify organ function. Parallel developments have also occurred in the field of radiopharmaceuticals, and today a wide range of products is available that will exhibit specific uptake within target

tissues following parenteral administration. For example, radioiodide is taken up by the thyroid and iodinated fatty acids can be used to image the myocardium. Labelled antibodies have been used with success to target certain tumours. The concept of targeting has also been considered by pharmaceutical scientists who wish to deliver drugs rather than radionuclides to specific sites in the body. The systems that have been employed are often physically similar to those used as radiopharmaceuticals (for example colloids, aerosols and liposomes). Furthermore, pioneering work by Digenis and others in the United States States and by Alpsten and co-workers (1976) in Sweden had demonstrated the potential of gamma scintigraphy for investigating the fate of tablets and capsules in the gastrointestinal tract of man in a non invasive way. In 1979, the Biopharmaceutics Research Group at Nottingham together with academic pharmacists from Manchester held a one-day symposium at Nottingham University to discuss how radio nuclides could be used in drug formulation studies to provide better approaches for the delivery of drugs to their sites of action. This database

encompasses all aspects of the impact of people and technology on the environment and the effectiveness of remedial policies and technologies, featuring more than 950 journals published in the U.S. and abroad. The database also covers conference papers and proceedings, special reports from international agencies, non-governmental organizations, universities, associations and private corporations. Other materials selectively indexed include significant monographs, government studies and newsletters. Developed especially for the TVET student at N6 level, Succeed in Entrepreneurship and Business Management N6 provides students with the necessary theoretical knowledge to write their exams and the practical application to enter the workplace confidently. Chemical and Synthetic Biology Approaches to Understand Cellular Functions - Part A, Volume 621, the latest release in the Methods in Enzymology series, highlights new advances in the field, with this volume covering Site-directed ethylation of membrane proteins for measuring conformational transitions in lipid bilayers, the Design and synthesis of fluorescent activity probes for protein phosphatases, Stains, Utilizing split-

nanoLuc fragments as luminescent probes for protein solubility in living cells, SH2-domain based sensor for intracellular recognition of sulfo-tyrosine, DNA-encoded immunoglobulins for detection of parasites, An engineered TEV protease - calmodulin fusion based sensor for neuronal calcium recording, and much more. Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in the *Methods in Enzymology* series Includes the latest information on methods to measure ubiquitin chain length and linkage and genetic approaches to study the yeast ubiquitin system, amongst other timely topics This eBook is a collection of articles from a *Frontiers Research Topic*. *Frontiers Research Topics* are very popular trademarks of the *Frontiers Journals Series*: they are collections of at least ten articles, all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, *Frontiers Research Topics* unify the most influential researchers, the latest key findings and historical advances in a hot research area! Find out more on how to host your own *Frontiers Research Topic* or

contribute to one as an author by contacting the Frontiers Editorial Office: [frontiersin.org/about/contact](http://frontiersin.org/about/contact). Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.
