The Book of Imaginary Beings Jan 18 2022 Few readers will want, or be able, to resist this modern bestiary. Borges' cunning and humorous commentary is sheer delight.

Springer Handbook of Automation Dec 05 2020 This handbook incorporates new developments in automation. It also presents a widespread and well-structured conglomeration of new emerging application areas, such as medical systems and health, transportation, security and maintenance, service, construction and retail as well as production or logistics. The handbook is not only an ideal resource for automation experts but also for people new to this expanding field.

Active Networks Sep 13 2021 This book constitutes the thoroughly refereed post-proceedings of the IFIP TC6 5th International Workshop on Active Networks, IWAN 2003, held in Kyoto, Japan, in December 2003. The 24 revised full papers presented were carefully reviewed and selected from 73 submissions. The papers are organized in topical sections on high performance and network processors, high-level active network applications, low-level active network applications, self-organization of active services, experiences with service engineering for active networks, management in active networks, and selected topics in active networks.

Rare Earth Feb 04 2021 What determines whether complex life will arise on a planet, or even any life at all? Questions such as these are investigated in this groundbreaking book. In doing so, the authors synthesize

information from astronomy, biology, and paleontology, and apply it to what we know about the rise of life on Earth and to what could possibly happen elsewhere in the universe. Everyone who has been thrilled by the recent discoveries of extrasolar planets and the indications of life on Mars and the Jovian moon Europa will be fascinated by Rare Earth, and its implications for those who look to the heavens for companionship.

Comprehensive Toxicology Jan 06 2021 An explosive increase in the knowledge of the effects of chemical and physical agents on biological systems has led to an increased understanding of normal cellular functions and the consequences of their perturbations. The 14-volume Second Edition of Comprehensive Toxicology has been revised and updated to reflect new advances in toxicology research, including content by some of the leading researchers in the field. It remains the premier resource for toxicologists in academia, medicine, and corporations. Comprehensive Toxicology Second Edition provides a unique organ-systems structure that allows the user to explore the toxic effects of various substances on each human system, aiding in providing diagnoses and proving essential in situations where the toxic substance is unknown but its effects on a system are obvious. Comprehensive Toxicology Second Edition is the most complete and valuable toxicology work available to researchers today. Contents updated and revised to reflect developments in toxicology research Organized with a unique organ-system approach Features full color throughout Available electronically on sciencedirect.com,

as well as in a limited-edition print version

Jan Hendrik Oort Jan 30 2023 This book is the first thorough and overdue biography of one of the giants of science in the twentieth century, Jan Hendrik Oort. His fundamental contributions had a lasting effect on the development of our insight and a profound influence on the international organization and cooperation in his area of science and on the efforts and contribution of his native country. This book aims at describing Oort's life and works in the context of the development of his branch of science and as a tribute to a great scientist in a broader sense. The astronomer Jan Hendrik Oort from the Netherlands was founder of studies of the structure and dynamics of the Milky Way Galaxy, initiator of radioastronomy and the European Southern Observatory, and an important contributor to many areas of astronomy, from the study of comets to the universe on the largest scales.

Training Manual on International Environmental Law Jun 10 2021 Being a grandmother is one of life's most important roles and many women can feel unprepared to take it on. New Age Nanas presents the rich and diverse views of over 1000 modern Australian grandmothers on what it is like to be a grandmother today, interwoven with expert commentary on how to make the most of this potentially

Physics and Technology for Future Presidents Oct 15 2021

Physics for future world leaders Physics and Technology for Future Presidents contains the essential physics that students need in order to understand today's core science and technology issues, and to become the next generation of world leaders. From the physics of energy to climate change, and from spy technology to quantum computers, this is the only textbook to focus on the modern physics affecting the decisions of political leaders and CEOs and, consequently, the lives of every citizen. How practical are alternative energy sources? Can satellites really read license plates from space? What is the quantum physics behind iPods and supermarket scanners? And how much should we fear a terrorist nuke? This lively book empowers students possessing any level of scientific background with the tools they need to make informed decisions and to argue their views persuasively with anyone—expert or otherwise. Based on Richard Muller's renowned course at Berkeley, the book explores critical physics topics: energy and power, atoms and heat, gravity and space, nuclei and radioactivity, chain reactions and atomic bombs, electricity and magnetism, waves, light, invisible light, climate change, quantum physics, and relativity. Muller engages readers through many intriguing examples, helpful facts to remember, a fun-to-read text, and an emphasis on real-world problems rather than

mathematical computation. He includes chapter summaries, essay and discussion questions, Internet research topics, and handy tips for instructors to make the classroom experience more rewarding. Accessible and entertaining, *Physics and Technology for Future Presidents* gives students the scientific fluency they need to become well-rounded leaders in a world driven by science and technology. Leading universities that have adopted this book include: Harvard Purdue Rice University University of Chicago Sarah Lawrence College Notre Dame Wellesley Wesleyan University of Colorado Northwestern Washington University in St. Louis University of Illinois - Urbana-Champaign Fordham University of Miami George Washington University Some images inside the book are unavailable due to digital copyright restrictions.

[The Signal and the Noise](#) Nov 03 2020 UPDATED FOR 2020 WITH A NEW PREFACE BY NATE SILVER "One of the more momentous books of the decade." —The New York Times Book Review Nate Silver built an innovative system for predicting baseball performance, predicted the 2008 election within a hair's breadth, and became a national sensation as a blogger—all by the time he was thirty. He solidified his standing as the nation's foremost political forecaster with his near perfect prediction of the 2012 election. Silver is the founder and editor in chief of the website FiveThirtyEight. Drawing on his own groundbreaking work, Silver examines the world of prediction, investigating how we can distinguish a true signal from a universe of noisy data. Most predictions fail, often at great cost to society, because most of us have a poor understanding of probability and uncertainty. Both

experts and laypeople mistake more confident predictions for more accurate ones. But overconfidence is often the reason for failure. If our appreciation of uncertainty improves, our predictions can get better too. This is the “prediction paradox”: The more humility we have about our ability to make predictions, the more successful we can be in planning for the future. In keeping with his own aim to seek truth from data, Silver visits the most successful forecasters in a range of areas, from hurricanes to baseball to global pandemics, from the poker table to the stock market, from Capitol Hill to the NBA. He explains and evaluates how these forecasters think and what bonds they share. What lies behind their success? Are they good—or just lucky? What patterns have they unraveled? And are their forecasts really right? He explores unanticipated commonalities and exposes unexpected juxtapositions. And sometimes, it is not so much how good a prediction is in an absolute sense that matters but how good it is relative to the competition. In other cases, prediction is still a very rudimentary—and dangerous—science. Silver observes that the most accurate forecasters tend to have a superior command of probability, and they tend to be both humble and hardworking. They distinguish the predictable from the unpredictable, and they notice a thousand little details that lead them closer to the truth. Because of their appreciation of probability, they can distinguish the signal from the noise. With everything from the health of the global economy to our ability to fight terrorism dependent on the quality of our predictions, Nate Silver’s insights are an essential read.

Scientific and Technical Aerospace Reports Nov 27 2022
Master of Galactic Astronomy: A Biography of Jan Hendrik Oort May 22 2022 This accessible and entertaining biography chronicles the life and triumphs of astronomer Jan Hendrik Oort, who helped lay the foundations of modern astronomy in the 20th century. The book puts into context some of Oort's most significant achievements, including his discovery that the Milky Way rotates, as well as his famous hypothesis that our Solar System is surrounded by a reservoir of comets — now simply known as the Oort Cloud. Written by Oort's former student, this fascinating story also delves into Oort's pivotal role in the foundation of major astronomical facilities, including radio telescopes in the Netherlands and the European Southern Observatory (ESO), which now operates the most successful astronomical observatories in the world. The book draws extensively on new archival research through the Oort Archives, along with personal reminiscences by Oort's son and astronomer-grandson, to paint a more detailed picture of Oort's life not just as an astronomer, but also as a husband, father, and citizen. The strong public interest in comets triggered by the Rosetta mission to comet 67P/Churyumov-Gerasimenko and the recently discovered interstellar comet in the Solar System make this book particularly timely.

History of Soybeans and Soyfoods in Japan, and in Japanese Cookbooks and Restaurants outside Japan (701 CE to 2014) Mar 08 2021 The world's most comprehensive, well documented, and well illustrated book on this subject, with 445 photographs and illustrations. Plus an extensive index.

The Tokugawa World Dec 29 2022 With over 60 contributions, The Tokugawa World presents the latest scholarship on early modern Japan from an international team of specialists in a volume that is unmatched in its breadth and scope. In its early modern period, under the Tokugawa shoguns, Japan was a world apart. For over two centuries the shogun's subjects were forbidden to travel abroad and few outsiders were admitted. Yet in this period, Japan evolved as a nascent capitalist society that could rapidly adjust to its incorporation into the world system after its forced "opening" in the 1850s. The Tokugawa World demonstrates how Japan's early modern society took shape and evolved: a world of low and high cultures, comic books and Confucian academies, soba restaurants and imperial music recitals, rigid enforcement of social hierarchy yet also ongoing resistance to class oppression. A world of outcasts, puppeteers, herbal doctors, samurai officials, businesswomen, scientists, scholars, blind lutenists, peasant rebels, tea-masters, sumo wrestlers, and wage workers. Covering a variety of features of the Tokugawa world including the physical landscape, economy, art and literature, religion and thought, and education and science, this volume is essential reading for all students and scholars of early modern Japan.

Natural Products and Human Diseases Feb 16 2022
Natural products have a long history of use as folk medicines in several systems of traditional medicine. Extensive evidence from modern pharmacological studies has confirmed traditional applications, and unveiled the vast potential of naturally occurring compounds, particularly plant-derived phytochemicals, in the

management of chronic human diseases. The past decade has witnessed a surge of findings from randomized controlled trials testifying the safety and efficacy of natural products as adjuncts or alternatives to standard-of-care medications for several illnesses. Biomolecular studies have unveiled hundreds of cellular and molecular targets for phytochemicals including key transcription factors, receptors, enzymes, hormones, neurotransmitters, cytokines, lipids, and non-coding RNAs. Extensive research on the preventative and therapeutic effects of natural products necessitates regular updating of the literature as to the developing potential roles of these compounds in different human diseases. This new book provides an overview of the current pharmacological and clinical features of natural products, and the role of phytopharmaceutical compounds in health and diseases. Chapters cover a wide scope, from cancers, to chronic and age-related disorders, and are written by leading international subject experts. Collectively, chapters will provide useful insights on the regulatory effects of phytochemicals and nutraceuticals on pathogenic molecular signatures associated with pathologies, disease biomarkers, and aging-related pathways.

The Observing Guide to the Messier Marathon Aug 25 2022 The Messier Catalogue is a list of one hundred and ten galaxies, star clusters and nebulae, and includes many of the brightest and best-known objects in the sky. Amateur astronomers who find all the objects on the list in one night have successfully completed the Messier

Marathon. The Observing Guide to the Messier Marathon contains over 90 easy-to-use star maps to guide the observer from one object to the next, and provides tips for a successful night of observing. Don Machholz also tells the story of the eighteenth-century astronomer, Charles Messier, and how he came to compile his extensive catalogue. His complete guide to the Messier Marathon will help the amateur astronomer to observe the Messier Objects throughout the year, using a small telescope or even a pair of binoculars. Don Machholz is an engineer in Auburn, California. Interested in astronomy since childhood, he is a renowned comet hunter, having discovered nine comets that bear his name. He writes articles for local California newspapers and radio stations for special astronomical events. Between 1988 and 2000, Don Machholz was the Comets Recorder for the Association of Lunar and Planetary Recorders.

Handbook of the Solar-Terrestrial Environment Apr 28 2020 As a star in the universe, the Sun is constantly releasing energy into space, as much as 3.8×10^{26} erg/s. This energy emission basically consists of three modes. The first mode of solar energy is the so-called blackbody radiation, commonly known as sunlight, and the second region were studied separately, but with the progress of solar electromagnetic emission, such as X rays and UV radiation, we realized the importance of treating the whole chain of processes as an entity because of stratosphere. The third

mode of solar energy emission is strong interactions between various regions within in the form of particles having a wide range of energies the solar-terrestrial system. On the basis of extensive from less than ? keV to more than ? GeV. It is convenient satellite observations and computer simulations over to group these particles into lower-energy particles and the past two decades, it has become possible to analyze higher-energy particles, which are referred to as the so- specifically the close coupling of different regions in the solar wind and solar cosmic rays, respectively. solar-terrestrial environment.

Toxicity Mechanisms, Exposure, Toxicokinetic and Risk Assessment Aspects of Metals, Toxic for Animals and Humans Mar 20 2022

The Chronicle of Zuqnān Oct 27 2022 The Chronicle of Zuqnān is a universal history beginning with the Creation according to the biblical account and ending with the time of the Chronicler, the years 775-776 AD. The author is most probably Joshua the Stylite, a contemporary of the Caliphs al-Mansur and al-Mahdi, who lived in the monastery of Zuqnān that was located near Amid, the Diar-Bakr of modern Turkey. Parts I and II contain compiled sources some of which survived only in this Chronicle. Sources include the Bible, Cave of Treasures, the Sleepers of Ephesus, Eusebius of Caesarea, Socrates, and the short Chronicle called Pseudo-Joshua the Stylite that deals with Sassanian-Byzantine warfare at the beginning of the 6th century. Parts III and IV cover the years 488 and 775 AD. In this volume, Parts I and II, including the author's dedicatory letter, are now published in an updated edition of the Syriac text and the first English translation.

The Last Samurai Oct 22 2019 The dramatic arc of Saigo Takamori's life, from his humble origins as a lowly samurai, to national leadership, to his death as a rebel leader, has captivated generations of Japanese readers and now Americans as well - his life is the inspiration for a major Hollywood film, *The Last Samurai*, starring Tom Cruise and Ken Watanabe. In this vibrant new biography, Mark Ravina, professor of history and Director of East Asian Studies at Emory University, explores the facts behind Hollywood storytelling and Japanese legends, and explains the passion and poignancy of Saigo's life. Known both for his scholarly research and his appearances on The History Channel, Ravina recreates the world in which Saigo lived and died, the last days of the samurai. *The Last Samurai* traces Saigo's life from his early days as a tax clerk in far southwestern Japan, through his rise to national prominence as a fierce imperial loyalist. Saigo was twice exiled for his political activities -- sent to Japan's remote southwestern islands where he fully expected to die. But exile only increased his reputation for loyalty, and in 1864 he was brought back to the capital to help his lord fight for the restoration of the emperor. In 1868, Saigo commanded his lord's forces in the battles which toppled the shogunate and he became a leader in the emperor Meiji's new government. But Saigo found only anguish in national leadership. He understood the need for a modern conscript army but longed for the days of the traditional warrior. Saigo hoped to die in service to the emperor. In 1873, he sought appointment as envoy to Korea, where he planned to demand that the Korean king show deference to the Japanese emperor, drawing his sword, if necessary, to defend imperial honor. Denied this chance to show his

courage and loyalty, he retreated to his homeland and spent his last years as a schoolteacher, training samurai boys in frugality, honesty, and courage. In 1876, when the government stripped samurai of their swords, Saigo's followers rose in rebellion and Saigo became their reluctant leader. His insurrection became the bloodiest war Japan had seen in centuries, killing over 12,000 men on both sides and nearly bankrupting the new imperial government. The imperial government denounced Saigo as a rebel and a traitor, but their propaganda could not overcome his fame and in 1889, twelve years after his death, the government relented, pardoned Saigo of all crimes, and posthumously restored him to imperial court rank. In *THE LAST SAMURAI*, Saigo is as compelling a character as Robert E. Lee was to Americans—a great and noble warrior who followed the dictates of honor and loyalty, even though it meant civil war in a country to which he'd devoted his life. Saigo's life is a fascinating look into Japanese feudal society and a history of a country as it struggled between its long traditions and the dictates of a modern future.

Conference Proceedings Feb 25 2020

Comets II May 10 2021 The study of comets is a field that has seen tremendous advances in recent years, far surpassing the knowledge reflected in the original *Comets* volume published as part of the *Space Science Series* in 1982. This new volume, with more than seventy contributing authors, represents the first complete overview of comet science in more than a decade and contains the most extensive collection of knowledge yet assembled in the field. *Comets II* situates comet science in the global context of astrophysics for the first time by

beginning with a series of chapters that describe the connection between stars and planets. It continues with a presentation of the formation and evolution of planetary systems, enabling the reader to clearly see the key role played in our own solar system by the icy planetesimals that were the seeds of the giant planets and transneptunian objects. The book presents the key results obtained during the 1990s, in particular those collected during the apparition of the exceptional comets C/Hyakutake and C/Hale-Bopp in 1996-1997. The latest results obtained from the in situ exploration of comets P/Borrelly and P/Wild 2 are also discussed in detail. Each topic of is designed to be accessible to students or young researchers looking for basic, yet detailed, complete and accurate, information on comet science. With its emphasis on the origin of theories and the future of research, Comets II will enable scientists to make connections across disciplinary boundaries and will set the stage for discovery and new understanding in the coming years.

Philipp Franz Von Siebold and the Opening of Japan Sep 01 2020 This new study challenges the conventional view that the key figures involved in the opening of Japan were the US Navy's Commodore Perry, and the diplomats Harris (US) and Alcock (UK). A close examination of new sources suggests otherwise and puts Von Siebold's agenda to 'save' Japan from being overtaken by the colonial and commercial ambitions of the West's great maritime nations in a new light.
