Global Biodiversity Oct 14 2019 This publication gives a broad ecological overview of current condition in the three main parts of the biosphere, the seas, the land and inland waters. It also provides an historical context, from the origin of life on the planet onward. This has been done to demonstrate the long history of life on earth and to emphasise the brevity of human existence. The first part of the book includes a discussion of the components of biodiversity and an account of the expansion of this diversity through geological time and the pattern of distribution on the planet. The second part covers features of human impacts on the environment and the uses currently made of biodiversity. The main lesson drawn is that while life itself has remarkable tenacity, the tenure on earth of individual species has always been a strictly limited one. The environment of any species has two main roles: to provide the essential materials for growth and reproduction of the species and to remove or transform its waste products. A failure of either of these two will have an adverse or catastrophic impact on the species concerned. Ecosystems and the biosphere continue to function because the relentless pressure of natural selection has meant that organisms have evolved that thrive on the waste products of other organisms. This is considered in the book to be the function of biological diversity. A

large number of tables and maps are presented in this publication, including a table on biodiversity at country level. This book has a companion volume, 'Life Counts'.

Disability Media Studies Jan 17 2020 Introduces key ideas and offers a sense of the new frontiers and questions in the emerging field of disability media studies **Disability Media Studies** articulates the formation of a new field of study, based in the rich traditions of media, cultural, and disability studies. Necessarily interdisciplinary and diverse, this collection weaves together work from scholars from a variety of disciplinary homes, into a broader conversation about exploring media artifacts in relation to disability. The book provides a comprehensive overview for anyone interested in the study of disability and media today. Case studies include familiar contemporary examples—such as Iron Man 3, Lady Gaga, and Oscar Pistorius—as well as historical media, independent disability media, reality television, and media technologies. The contributors consider disability representation, the role of media in forming cultural assumptions about ability, the construction of disability via media technologies, and how disabled audiences respond to particular media artifacts. The volume concludes with afterwords from two different perspectives on the field—one by disability scholar Rachel Adams, the other by media scholars Mara Mills and Jonathan Sterne—that reflect upon the collection, the ongoing conversations, and the future of disability media studies. **Disability Media Studies** is a crucial text for those interested in this flourishing field, and will pave the way for a greater understanding of disability media studies and its critical concepts and conversations.

Restricted Access Jan 29 2021 How reconsidering digital media and participatory cultures from the standpoint of disability allows for a full understanding of accessibility. While digital media can offer many opportunities for civic and cultural participation, this technology is not equally easy for everyone to use. Hardware, software, and cultural expectations combine to make some technologies an easier fit for some bodies than for others. A YouTube video without closed captions or a social network site that is incompatible with a screen reader can restrict the access of users who are hard of hearing or visually impaired. Often, people with disabilities require accommodation, assistive technologies, or other forms of aid to make digital media accessible—useable—for them. **Restricted Access** investigates digital media accessibility—the processes by which media is made usable by people with particular needs—and argues for the necessity of conceptualizing access in a way that will enable greater participation in all forms of mediated culture. Drawing on disability and cultural studies, Elizabeth Ellcessor uses an interrogatory framework based around issues of regulation, use, content, form, and experience to examine contemporary digital media. Through interviews with policy makers and accessibility professionals, popular culture and archival materials, and an ethnographic study of internet use by people with disabilities, Ellcessor reveals the assumptions that undergird contemporary technologies and participatory cultures. **Restricted Access** makes the crucial point that if digital media open up opportunities for individuals to create and participate, but that technology only facilitates the participation of those who are already privileged, then its progressive potential remains unrealized. Engagingly written with powerful examples, Ellcessor demonstrates the importance of alternate uses, marginalized voices, and invisible innovations in the context of disability identities to push us to rethink digital media accessibility.

David Vizard's How to Port and Flow Test Cylinder Heads Jun 02 2021 Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

Iron-Based Superconductivity Sep 05 2021 This volume presents an in-depth review of experimental and theoretical studies on the newly discovered Fe-based superconductors. Following the Introduction, which places iron-based superconductors in the context of other unconventional superconductors, the book is divided into three sections covering sample growth, experimental characterization, and theoretical understanding. To understand the complex structure-property relationships of these materials, results from a wide range of experimental techniques and theoretical approaches are described that probe the electronic and magnetic properties and offer insight into either itinerant or localized electronic states. The extensive reference lists provide a bridge to further reading. Iron-Based Superconductivity is essential reading for advanced undergraduate and graduate students as well as researchers active in the fields of condensed matter physics and materials science in general, particularly those with an interest in correlated metals, frustrated spin systems, superconductivity, and competing orders.

Assessing China's Naval Power May 13 2022

This book analyzes the rise of China's naval power and its possible strategic consequences from a wide variety of perspectives - technological, economic, and geostrategic - while employing a historical-comparative approach throughout. Since naval development requires huge financial resources and mostly takes place within the context of transnational industrial partnerships, this study also consciously adopts an industry perspective. The systemic problems involved in warship production and the associated material, financial, technological, and political requirements currently remain overlooked aspects in the case of China. Drawing on first-hand working experience in the naval shipbuilding industry, the author provides transparent criteria for the evaluation of different naval technologies' strategic value, which other researchers can draw upon as a basis for further research in such diverse fields as International Security Studies, Naval Warfare Studies, Chinese Studies, and International Relations.
