The embattled Kinsley administration is teetering on the edge of political ruin; fighting and losing an unwinnable war against drugs, and facing a tough re-election campaign. In order to save his Presidency, Operation Borgia White is spawned to stem the tide of the drug scourge enveloping America. Sporadic and untimely cocaine deaths sweep across the country. The Government attempts to reassure an anxious populace and sway public opinion toward more stringent measures the Administration has

planned to eradicate the drug problem once and for all. Dr. Lester Phillips, a Washington, DC Pediatrician, has seen the first telltale signs of the plot; the seizures, the cardiac and respiratory arrest, the lightning fast death. With the help of his colleague, pathologist Ray Rafferty, they slowly begin to assemble and put together clues, aided by a disgruntled Justice Department official. As Lester and Ray continue to pursue the truth, dark forces within the Administration unleash attacks against the men, their families, and their reputations. After Ray is attacked and presumed dead or missing, Lester must fight alone until he is unjustly accused of crimes against the state and arrested. During his captivity, he comes face to face with the mastermind of the intricate operation. As the plot finally unfolds, Lester realizes that the deaths of thousands of people have been collateral damage, and something far more sinister is planned. Lester is able to escape his captors, but is injured. He must make his way back to Washington, DC and warn the targets of the plot before it is too late. In the balance is the fate of American way of life as we know it. "a powerful, well informed argument for the importance of pluralism..." This book will tell young researchers what they need to know about doing educational research; it will encourage experienced researchers to see their own practice in context. It is a profound book that everyone should read." – Professor Jane Gaskell, Dean, OISE, University of Toronto "This brilliant guide to judging educational research examines the most basic questions about research practice that most people think are settled, and reveals them as problematic... Humorous, sharp, and thoughtful, this readable inquisition explores from differing perspectives 'what does good education research look like' in multiple forms including dissertations, journal articles, and grant proposals." – Sari Knopp Biklen, Laura and Douglas Meredith Professor, Syracuse University, USA This book explains and critically examines some key debates about the quality and value of education research, and shows how it must meet different demands in different places, times and conditions. A major part of the book provides detailed analyses and guidance to different areas in which education research is judged: from academic theses to the press; from highest level competition for prestigious grants to collaborative work with practitioners. Lyn Yates asks probing questions in six education research arenas – the thesis, the research grant application, the journal article, the consultancy application, book publishing, and the press: Who are the judges here? What expectations and networks do they bring to the task? What are the explicit and implicit criteria for good research in that area? What are the common failings? What does good research look like? The book is an indispensable companion to existing textbooks on research methodology. It provides a clear and provocative discourse about the banalities and disorderliness in which education researchers have to operate. Information literacy textbook. Raising a baby is joyful, amazing . . . and ridiculously difficult. But with some insight into what's actually going on inside your little one's head, your job as a parent can become a little bit easier—and a lot more fun. In *Think Like a Baby*, coauthors Amber and Andy Ankowski—The Doctor and the Dad—show parents how to re-create classic child development experiments using common household items. These simple step-by-step experiments apply from the third trimester through age seven and beyond and help parents understand their children's physical, cognitive, language, and social development. Amazed parents won't just read about how their kids are behaving, changing, and thinking at various stages, they'll actually see it for themselves while interacting and having fun with them at the same time. Each experiment is followed by a discussion of its practical implications for parents, such as why to always bring more than one toy to a restaurant, which baby gadgets to buy (and which ones to avoid), how to get kids to be perfectly happy eating just half of their dessert, and much more. **Glucagon-Like Peptides—Advances in Research and Application: 2013 Edition is a ScholarlyBrief™** that delivers timely, authoritative, comprehensive, and specialized information about Glucagon-Like Peptide 1 in a concise format. As school districts across the United States increasingly question the need for trained librarians, this collection of research-based evidence helps make the case for a state-licensed librarian in every school. • Utilizes evidence-based findings to explain why school libraries—and trained librarians—matter • Illustrates the progression of ideas around current education debates • Shares numerous examples of quantitative and qualitative research design and application • Summarizes the importance of each study and its practical application for working school librarians Written by experts on the frontlines, **Investigating Internet Crimes** provides seasoned and new investigators with the background and tools they need to investigate crime occurring in the online world. This invaluable guide provides step-by-step instructions for investigating Internet crimes, including locating, interpreting, understanding, collecting, and documenting online electronic evidence to benefit investigations. Cybercrime is the fastest growing area of crime as more criminals seek to exploit the speed, convenience and anonymity that the Internet provides to commit a

diverse range of criminal activities. Today's online crime includes attacks against computer data and systems, identity theft, distribution of child pornography, penetration of online financial services, using social networks to commit crimes, and the deployment of viruses, botnets, and email scams such as phishing. Symantec's 2012 Norton Cybercrime Report stated that the world spent an estimated \$110 billion to combat cybercrime, an average of nearly \$200 per victim. Law enforcement agencies and corporate security officers around the world with the responsibility for enforcing, investigating and prosecuting cybercrime are overwhelmed, not only by the sheer number of crimes being committed but by a lack of adequate training material. This book provides that fundamental knowledge, including how to properly collect and document online evidence, trace IP addresses, and work undercover. Provides step-by-step instructions on how to investigate crimes online Covers how new software tools can assist in online investigations Discusses how to track down, interpret, and understand online electronic evidence to benefit investigations Details guidelines for collecting and documenting online evidence that can be presented in court

**Wildlife forensics** is the application of forensic science to the conservation and protection of non-domesticated animals, both in the wild and in captivity. Providing an in-depth introduction to this rapidly evolving field, **Wildlife Forensic Investigation: Principles and Practice** also chronicles aspects of the history of management, conservation, and environmental protection, with an emphasis on their global importance in the twenty-first century. The book examines the crucial role of wildlife forensic investigation with regard to live animals, dead animals and samples and covers national, regional, and international legislation. While the text particularly focuses on forensic science as it relates to wild animals, it also includes mention of plants and habitats because of their relevance to conservation. The book discusses animal welfare as well as the damage that can be inflicted on humans and property by wildlife. Offering access to sound evidence based on good science and obtained using the best available practices, the book is enhanced by case studies from experts who describe some of their own work. This resource is essential for those involved in a range of endeavours, including investigating wildlife crime, identifying animal remains, ascertaining the circumstances of death of wild species, and other legal proceedings and activities concerning wildlife. The forensic skills described in this book can be applied to a wide range of activities (not necessarily involving the legal process), including environmental impact assessments, insurance claims, governmental and other enquiries, checking of trading standards and the inspection of (for instance) pet-shops, animal boarding establishments, and zoological collections. The authors point out that one of the most important requirements of those persons involved in wildlife forensic work is to retain an open mind. Such personnel should also be conscious of new developments and evolving techniques and be able to anticipate situations where their investigative and scientific skills might be used to advantage—so-called "horizon scanning". Examples of these are given. Each of us has "hard - to - love" people in our lives sometimes they are those nearest and dearest to us! **Loving Like Jesus**, an interactive study ideal for individuals or small groups, helps women learn how to obey Jesus' commandment to love one another. First, believers must learn to understand the essence of genuine love and fully accept Jesus' love for us all - only then can they move beyond personal feelings and extend His love to others. **Loving Like Jesus** includes eight weeks of study. Topics include "Love's Tremendous Importance," "Love's Incredible Power and Ultimate Source," "Love Is Sacrificing and Serving," "love Covers Over Wrongs and Is Patient" and much more. Each week's study examines a

facet of love, digs into Scripture to find out what God's Word has to say about it, offers readers an opportunity to reflect on their own efforts to love and suggests practical action steps to help women apply what they are learning. The past year has produced some of the most exciting results in the history of astronomy, particularly in the area of planets outside our solar system. Only a half-year before our meeting in Toledo, Spain, the first unambiguous detection of planet-sized masses orbiting main sequence stars were reported. Since that time, evidence for a new exo planet has been reported almost at the rate of about once per month. Some of these objects are likely to turn out to be very low-mass stars, but something like half show characteristics - Jupiter-like mass and near-zero orbital eccentricity - which appear to be unique to planets. Almost at the same time that giant planets were being discovered regularly, the two major space agencies, ESA and NASA, have identified searches for and detailed study of Earth-like planets as a major priority for the future. In ESA's "Horizon 2000 Plus" programme, an infrared interferometer has been proposed as a possible future Cornerstone mission. Similarly, scientists in the US produced the "Road Map for the Exploration of Neighboring Planetary Systems (ExNPS)", which provided NASA with a long-term plan which leads also to an infrared interferometer in space to study hypothetical Earth-like worlds beyond our Solar System. Such an observatory is designed to search for the thermal emission from a family of planets, using interferometric nulling to remove the contaminating light from the central star. The study of the insulin-like growth factor (IGF) family has become an exciting area of investigation. Initially, this family consisted of ligands (insulin, IGF-I and IGF-m and receptors (the insulin receptor, the type I or IGF-I receptor and the type II or IGF-IYM-6-P receptor). Subsequently, it was discovered that six specific binding proteiops (IGFBPs 1-6) play a major role in the actions of this growth factor family. In addition, there are now more potential receptors when one considers the possible roles of the insulin-receptor related receptor (IRR) and hybrid receptor dimers composed of insulin and IGF-I receptor (half-receptors). Another important aspect of this area of research is the realization that the IGFs are not only essential for normal growth and development but, in addition play an important role in the normal specialized function(s) of all tissues of the body, including the nervous system, skeleton, reproductive system, kidney, and the immune system, to name but a few. The development of recombinant human IGF-I for clinical testing has been a major breakthrough for investigators. Potential uses include wound healing, reversal of catabolic states, diabetes, bone remodeling, recovery from acute renal failure and many others. will determine both its use and its potential hazards. The manner in which criminal investigators are trained is neither uniform nor consistent, ranging from sophisticated training protocols in some departments to on-the-job experience alongside senior investigators in others. Ideal for students taking a first course in the subject as well as professionals in need of a refresher, Introduction to Criminology Are you stuck in your genealogical research? Wondering how to make progress on your brick wall problems? Discover the process that a professional genealogist uses to solve difficult cases. Research Like a Pro: A Genealogist's Guide shares a step-by-step method using real world examples, easily understood by any level of genealogist; written for the researcher ready to take their skills to the next level. Research Like a Pro: A Genealogist's Guide will give you the tools to: - Form an objective focusing your research for an entire project.- Review your research with new eyes by creating your own timeline analysis.- Construct a locality guide to direct your research.- Create a plan to keep your research on track.- Style source citations, giving your work credibility.- Set up a research log to organize and track your searches.- Write a report detailing your findings and ideas for future research. Links to templates give you the tools you need to get started and work samples illustrate each step. You'll learn to execute a research project from start to finish, then start again with the new information discovered. Whether you are a newbie or experienced researcher, Research Like a Pro: A Genealogist's Guide will move the search for your ancestors forward. Start now to learn to research Like a Pro. In the midst of a technological age, a strange and menacing phenomenon rains upon the Earth, changing people into mindless savages. While governments around the globe unite to combat this spreading infection, airships of the 1930's are redesigned and reintroduced to the world. Because of the vessel's size and its capability to stay airborne for weeks at a time, it is regarded as the next innovation for cruise ship/vacation travel industries, while environmentalists envision it as a solution to the world's overpopulation problem. The windship proves its worth when the stricken become organized and rise up against the world. It is then; the windship becomes a reckoning force and Earth's only hope for survival. "There are two kinds of companies: those that have been breached and those that do not know it yet." The company calling us just discovered an anomaly on their most critical systems. Our job is to conduct a deep forensic analysis, perform threat assessment, and uncover all malware programs left by hackers. Digital Forensics We follow the attacker's footprint across a variety of systems and create an infection timeline to help us understand their motives. We go as deep as memory analysis, perfect disk copy, threat hunting and malware analysis while sharing insights into real crisis management. Rebuilding systems Finally, we tackle the most important issues of any security incident response: how to kick the attackers out of the systems and regain trust in machines that have been breached. For those that read hacking books like the "Art of Exploitation" or "How to Hack Like a Pornstar," you finally get to experience what it feels like to be on the other side of the Firewall! This introduction to space science for children uses the story of Neil deGrasse Tyson's life and career to frame the journey. Catch the thrill of the cosmos and space science through the life of Neil deGrasse Tyson—the popular astrophysicist, science communicator, and host of FOX-TV's Cosmos: A Spacetime Odyssey. In language neither too simple nor overly technical, author CAP Saucier interweaves up-to-date information about the universe and the science of astrophysics with a biographical portrait of the famous astrophysicist. Quotes from Tyson appear throughout each chapter, personalizing the science. Illustrated with striking images from the Hubble Space Telescope, the story of one man's successful life in space science may inspire kids to follow a similar path. As Tyson makes clear, there is still much to do for future space scientists: diverting asteroids, unraveling the mystery of dark matter, finding life elsewhere in the universe, and more!
