In a rapidly changing world, the underlying philosophies, the rationale and the appropriateness of patent law have come under question. In this insightful collection, the authors undertake a careful examination of existing patent systems and their prospects for the future. Scholars and practitioners from Japan, the US, Europe, India, Brazil and China give detailed analyses of current and likely future problems with their respective systems, and outline possible responses to them. With detailed and extensive contributions, this book will greatly appeal to students, practitioners, policymakers and academics who are interested in the problems of current patent system in the world and their future. The answers to questions on a wide variety of social and political issues from more than 25,000 respondents are contained in the General Social Survey (GSS) data base. The authors, who have directed the GSS since its inception, have set out to enable social scientists to exploit this large data set more effectively. The book outlines such topics as the recurrent, replicated 'core' items suitable for trend analyses, the annual topical modules on subjects of current interest and the international modules produced in collaboration with the International Social Survey Programme. If you already possess some background in Civil 3D but want to broaden your understanding of this popular civil engineering software, Mastering AutoCAD Civil 3D 2009 will provide you with detailed coverage of advanced topics like surveying, LandXML and LDT Project Transfer, cross-sections, pipe networks, visualization, project management, and data shortcuts. Many of the featured topics and techniques, directly applicable to the civil engineering profession, are previously undocumented. Practical tutorials, tips, tricks, real-world examples and easy-to-follow explanations detail all aspects of a civil engineering project. For Instructors: Teaching supplements

For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network. Several decades of international aid, predominantly granted by the highly developed world (the haves), for the use of ICT in developing regions (known by several labels, such as the have-nots, bottom of the pyramid, the south, or, some time ago, the third world) have passed, but the holy grail of turning these societies into the ideals defined by the donors is still elusive. Previously the emphasis was on top-down approaches in this endeavour. Now priority is increasingly given to bottom-up approaches, putting the targeted communities first, using methods such as co-creation and living labs. Information and Communication Technologies for Development (ICT4D) is still a domain in search of a common ground. The many different perspectives from diverse ideologies, paradigms and theoretical perspectives here lead to an interesting debate, but, meanwhile, agents of social change are doing their best to change communities - ostensibly for the better. An ongoing endeavour, this discussion requires further investigation of the complexities of techno-societies. The contributions to this volume range from explorations of theory, models and methods to investigations into the practical implementation of ICT in communities, covering the characteristics of social groups and different generations and gender issues, as well as its applications in education and health. As such, the contributions in this book will inform continuing debates concerning the role of ICT in developing communities on the wrong side of all the technical and social divides in human societies.
