Digital business has been driving the transformation of underlying information technology (IT) infrastructure to be more efficient, secure, adaptive, and integrated. IT must be able to handle the explosive growth of mobile clients and employees. It also must be able to process enormous amounts of data to provide deep and real-time insights to help achieve the greatest business impact. This IBM® Redbooks® publication addresses the new IBM z Systems™ single frame, the IBM z13s server. IBM z Systems servers are the trusted enterprise platform for integrating data, transactions, and insight. A data-centric infrastructure must always be available with a 99.999% or better availability, have flawless data integrity, and be secured from misuse. It needs to be an integrated infrastructure that can support new applications. It also needs to have integrated capabilities that can provide new mobile capabilities with real-time analytics delivered by a secure cloud infrastructure. IBM z13s servers are designed with improved scalability, performance, security, resiliency, availability, and virtualization. The superscalar design allows z13s servers to deliver a record level of capacity over the prior single frame z Systems server. In its maximum configuration, the z13s server is powered by up to 20 client characterizable microprocessors (cores) running at 4.3 GHz. This configuration can run more than 18,000 millions of instructions per second (MIPS) and up to 4 TB of client memory. The IBM z13s Model N20 is estimated to provide up to 100% more total system capacity than the IBM zEnterprise® BC12 Model H13. This book provides information about the IBM z13s server and its functions, features, and associated software support. Greater detail is offered in areas relevant to technical planning. It is intended for systems engineers, consultants, planners, and anyone who wants to understand the IBM z Systems™ functions and plan for their usage. It is not intended as an introduction to mainframes. Readers are expected to be generally familiar with existing IBM z Systems technology and terminology. Building on over 20 years of virtual tape experience, the TS7760 now supports the ability to store virtual tape volumes in an object store. This IBM Redpaper publication helps you set up and configure the new cloud object storage support for IBM Cloud Object Storage (COS) or Amazon Web Services (AWS). The TS7700 supported off loading to physical tape for over two decades. Off loading to physical tape behind a TS7700 is used by hundreds of organizations around the world. By using the same hierarchical storage techniques, the TS7700 can also off load to object storage. Because object storage is cloud-based and accessible from different regions, the TS7760 Cloud Storage Tier support essentially allows the cloud to be an extension of the grid. In this IBM Redpaper publication, we provide a brief overview of cloud technology with an emphasis on Object Storage. Object Storage is used by a broad set of technologies, including those technologies that are exclusive to IBM Z®. The aim of this publication is to provide a basic understanding of cloud, Object Storage, and different ways it can be integrated into your environment. This Redpaper is intended for system architects and storage administrators with TS7700 experience who want to add the support of a Cloud Storage Tier to their TS7700 solution. This guide explains how to place a MAXserver model 1600 or 1608 terminal server into operation. The guide covers hardware installation, cabling, configuration, and a description of basic server commands. Organization This guide is organized as follows: Chapter 1 (Introduction) -- Describes the functions and capabilities of the MAXserver 1600 and 1608 terminal servers. This chapter also describes software requirements, and explains how the MAXserver 1600 or 1608 stores its configuration data (parameters). Chapter 2 (Getting Started) -- Describes the hardware installation procedures and explains how to initialize connected devices. By following the instructions in this chapter, you should be able to place a MAXserver 1600 or 1608 terminal server into operation without making a service call. Chapter 3 (Troubleshooting) -- Describes what to do if you encounter a problem during the MAXserver 1600 or 1608 installation or while the server is in operation. This chapter explains how the MAXserver 1600/1608 indicates errors and how to reset the unit. Chapter 4 (Configuratinterface (BNC connector). (See Figure B-1 for AUI connector signal assignments.) TCP/IP and LAT Protocol Support -- The MAXserver 1600 and 1608 provide concurrent support for the DEC Local Area Transport (LAT(R)) and TCP/IP protocols. Memory Card -- An optional Memory card, from which the unit can load its operating software. Two memory card types are currently available from Xyplex: "Flash" cards, which are readable/writeable and can be upgraded to a newer software version "ROM" (or "OTP") cards, which are read-only and cannot be updated The MAXserver 1600 and 1608 can also load software from the Memory card, over the network, to MAXserver 1100/1120, 1500/1520, 1600/1608, and 1800/1820 terminal server units. Network Software Loading -- If you order a MAXserver 1600 or 1608 without a Memory card, the unit loads its operating software from a network host called a load server. The load server is typically a UNIX™ or VAX/VMSTM system. Alternatively, a Xyplex MAXserver Manager card (MAXman) or MAXserver 1800/1820 terminal server can be used. The load server downloads a software image to the MAXserver 1600/1608, over the network, whenever the terminal server is powered on or reinitialized. The load server can support other devices as well. Expandable Memory -- The MAXserver 1600 and 1608 are shipped with either 1 MB or 3 MB of factory installed memory. The memory can be expanded in 2 MB increments, up to 5 MB, using SIMM memory modules. SIMMs should be installed by qualified personnel only. To upgrade your MAXserver 1600 or 1608, contact your Xyplex sales representative. The order code for a 2 MByte SIMM memory upgrade kit is MX-500-5744. (If you only need installation instructions, the order code is MX-420-0608.) Concurrent Flow Control and Modem Control Support -- The MAXserver 1600 and 1608 provide concurrent support for RTS/CTS flow control signals and modem control signals on all 16 ports. New adaptors are available to support cabling to MAXserver 1600/1608 ports when these signals are used. In most cases, the MAXserver 1600/1608 can also use existing MAXserver 1000-series cabling, if support for the new signals is not required. This IBM® Redbooks® publication discusses the IBM zEnterprise System, an IBM scalable mainframe server. IBM is taking a revolutionary approach by integrating separate platforms under the well-proven System z hardware management capabilities, while extending System z qualities of service to those platforms. The zEnterprise System consists of the IBM zEnterprise 114 central processor complex, the IBM zEnterprise Unified Resource Manager, and the IBM zEnterprise BladeCenter® Extension. The z114 is designed with improved scalability, performance, security, resiliency, availability, and virtualization. The z114 provides up to 18% improvement in uniprocessor speed and up to a 12% increase in total system capacity for z/OS®, z/VM®, and Linux on System z over the z10™ Business Class (BC). The zBX infrastructure works with the z114 to enhance System z virtualization and management through an integrated hardware platform that spans mainframe, POWER7™, and System x technologies. The federated capacity from multiple architectures of the zEnterprise System is managed as a single pool of resources, integrating system and workload management across the environment through the Unified Resource Manager. This book provides an overview of the zEnterprise System and its functions, features, and associated software support. Greater detail is offered in areas relevant to technical planning. This book is intended for systems engineers, consultants, planners, and anyone wanting to understand the zEnterprise System functions and plan for their usage. It is not intended as an introduction to mainframes. Readers are expected to be generally familiar with existing IBM System z technology and terminology. InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates people, companies, and projects.
