The book covers emerging technologies and new research in oncology, ensuring it is fully up to date with the latest advances in the field. Comprised of 25 chapters, topics range from lasers in head and neck cancers, to central nervous system and eye tumours. Chapters on soft tissue sarcoma, radiation pathology, emergencies in oncology, and paediatric tumours feature information on emerging technologies in these areas. With full colour images and illustrations throughout, **Principles and Management of Cancer** is a comprehensive resource covering everything from imaging, emergencies and nutrition, to new drug discoveries and clinical trials. **Key Points** Comprehensive resource on cancer, with the latest on current developments in the field Focuses on new research and technologies Full colour images and illustrations throughout **Carcinoma of the prostate** increasingly dominates the attention of urologists for both scientific and clinical reasons. The search for an explanation and the prediction of the variable behaviour of the malignant prostatic cell continues unabated. The search for more precise tumour staging and more effective treatment is equally vigorous. Editors Andrew Bruce and John Trachtenberg have assembled acknowledged leaders in prostate cancer to present those areas of direct interest to the clinician. There are a number of other topics that might have been considered but most of these, such as experimental tumour models or biochemical factors affecting cell growth, still lack immediate application for the clinician. **Carcinoma of the prostate** continues to have its highest incidence in the western world, and the difference in comparison with the incidence in the Far East appears to be real and not masked by diagnostic or other factors. A number of other epidemiological aspects need careful analysis: Is the incidence increasing? Is the survival improving? Is the prognosis worse in the younger patient? Epidemiological data are easily misused and misinterpreted so that a precise analysis of the known facts makes an important opening

chapter to this book. This book represents a comprehensive description and evaluation of the most up-to-date approaches to cancer management. The editor of Skin Cancer Management: A Practical Approach, Dr. Deborah MacFarlane, gathers experts in selected techniques related to the assessment and management of skin cancer and has them critically review the existing literature in light of their considerable experience delivering care. The authors make recommendations for the best way to perform procedures. The tables provided in each chapter then become a manual of how to perform these procedures, and may in time be adopted by the wider universe of dermatologists as the standard of performance. The detailed descriptions of technique and treatment pearls lead the novice through the sequence of events in a way that instills confidence in their ability to safely perform the procedure. An example of the painstaking explanations is found in Chapter 5, Intralesional and Perilesional Treatment of Skin Cancers. The reader is advised to place eye protection on the patient and those performing the injection of methotrexate into a keratoacanthoma with a central crust. Rest assured that there will be a spray or stream of methotrexate emitted from the crusted area. Having eye protection will prevent methotrexate from accidentally getting into someone's eye. Since we all learn to assimilate new information by taking action on the

recommendations that we read, it would be a good idea for the physician to create, where relevant, a checklist for each procedure in the text. The checklist can be given to the office staff to set up the equipment for the procedure. **Ovarian Cancer: Advances in Diagnosis and Management** presents unique international perspectives on this devastating disease. While ovarian cancer has mainly been considered a disease of the Western hemisphere, this book moves beyond our conventional understanding and embraces knowledge from around the world. This book is an excellent resource on the international state-of-the-art in the diagnosis and management of ovarian cancer and is aimed at oncologists, gynecologists, and fellows. **Malnutrition and its related symptoms** are both frequent and deleterious effects of cancer treatment. Despite the importance of targeted nutritional interventions in ameliorating these effects, however, publications providing up-to-date information on novel nutritional approaches and strategies are lacking. This book is intended to fill the void by describing and evaluating in detail the nutritional strategies that may be employed to alleviate a wide variety of cancer treatment effects. The guidance provided will help to improve the survival and quality of life of cancer patients, and has the potential to dramatically affect how evidence-based clinical practice is established and improved over the coming decade. The author is a distinguished expert in the field who has more than 25 years of experience in oncology nutrition and has been involved in establishing and implementing a Clinical Nutrition Oncology Program. This volume highlights many of the important advances that have improved our understanding of the biology and therapeutics of breast cancer. The initial discussion focuses on the evolving understanding of the genetics of breast cancer. In addition to the well known genetic mutations BRCA1 and BRCA2, other mutations that have recently been identified are discussed. Advanced Drug Delivery Systems in the Management of Cancer discusses recent developments in nanomedicine and nano-based drug delivery systems used in the treatment of cancers affecting the blood, lungs, brain, and kidneys. The research presented in this book includes international collaborations in the area of novel drug delivery for the treatment of cancer. Cancer therapy remains one of the greatest challenges in modern medicine, as successful treatment requires the elimination of malignant cells that are closely related to normal cells within the body. Advanced drug delivery systems are carriers for a wide range of pharmacotherapies used in many applications, including cancer treatment. The use of such carrier systems in cancer treatment is growing rapidly as they help overcome the limitations associated with conventional drug delivery systems. Some of the conventional limitations that these advanced drug delivery systems help overcome include nonspecific targeting, systemic toxicity, poor oral bioavailability, reduced efficacy, and low therapeutic index. This book begins with a brief introduction to cancer biology. This is followed by an overview of the current landscape in pharmacotherapy for the cancer management. The need for advanced drug delivery systems in oncology and cancer treatment is established, and the systems that can be used for several specific cancers are discussed. Several chapters of the book are devoted to discussing the latest technologies and advances in nanotechnology. These include practical solutions on how to design a more effective nanocarrier for the drugs used in cancer therapeutics. Each chapter is written with the goal of informing readers about the latest advancements in drug delivery system technologies while reinforcing understanding through various detailed tables, figures, and illustrations. Advanced Drug Delivery Systems in the Management of Cancer is a valuable resource for anyone working in the fields of cancer biology and drug delivery, whether in academia, research, or industry. It addresses such topics as epidemiology, biology, screening and chemoprevention, the role of imaging in diagnosis, staging and prognosis, radiation therapy, medical and surgical treatment, as well as new modalities of therapy, including laparoscopy, and transanal endoscopic surgery. A greater understanding of prognostic factors, patterns of spread and natural history has occurred during the past decade; together with new diagnostic modalities this has led to significant changes in the management of patients with rectal cancer. This book will be invaluable for all those who treat rectal cancer. Significant advances made by Western medicine in the treatment of cancer are well-documented, but little has been written in English on complementary holistic treatment with Chinese medical methods that manage its symptoms and ameliorate the side effects of surgery, chemotherapy or radiotherapy. This book explains

the complementary approach using cases from the medical files of Professor Rencun Yu, who was trained in Western medical oncology but also practices Chinese medicine. In addition, introductory chapters explain the basic principles of Chinese medicine, while other chapters cover the prevention of cancers through appropriate nutrition and living habits. The book should command the attention of medical professionals as well as the layperson interested in preventing and understanding the illness. There is no equivalent book in English that so skillfully combines an introduction to Chinese medical principles and cancer management for the general reader with detailed clinical studies of the crucial complementary role played by Chinese medicine in Western treatments for cancer patients. Contents: Introduction Principles of Diagnosis and Therapy in Traditional Chinese Medicine Herbs and Prescriptions for Therapy Cancer Prevention and Treatment Using TCM Major Forms of Cancer and Case Studies Diet, Exercise and Health Cultivation Readership: (i) Medical professionals, both Western medical doctors and TCM practitioners, particularly those practicing in Australia, Europe and America and (ii) the lay reader who either wants general knowledge on how to prevent cancer or wishes to understand how TCM can help a friend, relative or loved one who suffers from the disease. Cancer remains a major clinical challenge as a cause of death due to its frequent poor prognosis and limited treatment options in many cases. Cancer management book addresses various cancer management related topics including new approaches for early cancer detection and novel anti-cancer therapeutic strategies. This book is a collection of studies and reviews written by experts from different parts of the world to present the most up-to-date knowledge on cancer management. Cancer Symptom Management, Fourth Edition covers multiple symptoms inherent in the treatment of cancer. Each symptom is examined in terms of its cause, pathophysiology, assessment, management, evaluation of therapeutic approaches, and patient self-care. New Chapters: * Hypersensitivity Reactions to Antineoplastic Drugs * Extravasation * Ocular and Otic Complications * Symptoms When Death is Imminent Designed to assist clinical oncology nurses in skillfully relieving and diminishing the cancer patient's symptoms, this new edition provides essential information and the tools necessary to provide quality care to cancer patients. Cancer care today often provides state-of-the-science biomedical treatment, but fails to address the psychological and social (psychosocial) problems associated with the illness. This failure can compromise the effectiveness of health care and thereby adversely affect the health of cancer patients. Psychological and social problems created or exacerbated by cancer--including depression and other emotional problems; lack of information or skills needed to manage the illness; lack of transportation or other resources; and disruptions in work, school, and family life--cause additional suffering, weaken adherence to prescribed treatments, and threaten patients' return to health. Today, it is not possible to deliver high-quality cancer care without using existing approaches, tools, and resources to address patients' psychosocial health needs. All patients with cancer and their families should expect and receive cancer care that ensures the provision of appropriate psychosocial health services. Cancer Care for the Whole Patient recommends actions that oncology providers, health policy makers, educators, health insurers, health planners, researchers and research sponsors, and consumer advocates should undertake to ensure that this standard is met. Cancer is diagnosed in over one million Americans annually, & one of five deaths in the U.S. -- about 1,400/day -- result from cancer. This Guideline provides recommendations about the assessment & management of cancer pain. Describes the uses of analgesics & adjuvant drugs, cognitive/behavior strategies, physical modalities, palliative radiation & antieoplastic therapies, nerve blocks & palliative & ablative surgery. Developed by an interdisciplinary panel of clinicians, patients, & experts in health policy. Tables of scientific evidence. Glossary, bibliography & acronyms. Charts & tables.
