In *User Experience Research: Discover What Customers Really Want*, a human factors psychologist and an industrial designer have devised a foolproof phase that addresses the shortcomings of the design thinking process. Based on their forty years of generative research experience in multiple industries, this is the definitive guide to user experience research. These features make it particularly difficult for library employees to answer users' questions and thus a guide such as this one is essential. Not all libraries with a music collection can afford to hire a music reference librarian; libraries with such a specialist rely on support staff and student employees to answer questions when the music librarian is not available. Whatever the scenario, this volume will serve as a helpful training tool for library employees to learn about the basic music reference tools, and to develop techniques of greatest use when answering the most common types of music-related questions.
