Concise introduction and reference that may be used by busy practitioners and in training programs as a practical guide for clinical automated perimetry and particularly visual field testing using the Humphrey perimeter.

According to a longstanding interpretation, book religions are agents of textuality and logocentrism. This volume inverts the traditional perspective: its focus is on the strong dependency between scripture and aesthetics, holy books and material artworks, sacred texts and ritual performances. The contributions, written by a group of international specialists in Western, Byzantine, Islamic and Jewish Art, are committed to a comparative and transcultural approach. The authors reflect upon the different strategies of »clothing« sacred texts with precious materials and elaborate forms. They show how the pretypographic cultures of the Middle Ages used book ornaments as media for building a close relation between the divine words and their human audience. By exploring how art shapes the religious practice of books, and how the religious use of books shapes the evolution of artistic practices this book contributes to a new understanding of the deep nexus between sacred scripture and art. A typical entry provides the plant's botanical name and family, whether it is an annual or perennial, and its height, hardiness, light requirements, water consumption, and required soil type and pH. The plant's name in various languages is included, as is a history of the plant, its chemistry, how to propagate the plant, and its culinary and landscape uses. A botanical key is given to identify the plant,

and its description includes its country of origin and various data on the plants, leaves, flowers, fruits, and seeds. The second edition of *The Diversity of Fishes* represents a major revision of the world's most widely adopted ichthyology textbook. Expanded and updated, the second edition is illustrated throughout with striking color photographs depicting the spectacular evolutionary adaptations of the most ecologically and taxonomically diverse vertebrate group. The text incorporates the latest advances in the biology of fishes, covering taxonomy, anatomy, physiology, biogeography, ecology, and behavior. A new chapter on genetics and molecular ecology of fishes has been added, and conservation is emphasized throughout. Hundreds of new and redrawn illustrations augment readable text, and every chapter has been revised to reflect the discoveries and greater understanding achieved during the past decade. Written by a team of internationally-recognized authorities, the first edition of *The Diversity of Fishes* was received with enthusiasm and praise, and incorporated into ichthyology and fish biology classes around the globe, at both undergraduate and postgraduate levels. The second edition is a substantial update of an already classic reference and text. New York Times bestselling author Gabbie Hanna delivers everything from curious musings to gut-wrenching confessionals in her long-awaited sophomore collection of

illustrated poetry. In this visually thrilling installment of the inner-workings of Gabbie's mind, we're taken on a journey of self-loathing, self-reflection, and ultimately, self-acceptance through deeply metaphorical imagery, chilling twists on child-like rhymes, and popular turns of phrase turned on their heads. Through raw, provocative tidbits, Dandelion explores what it means to struggle with a declining mental health in a world where mental health is both stigmatised and trivialised. The poems range from topics of rage and despair to downright silliness, so if you don't know whether to laugh or cry, just laugh until you cry. Exclusive bonus content: a collection of uncomfortably honest personal essays about Gabbie's childhood and relationships. Volume two reveals the extraordinary diversity of ancient Roman religion. A comprehensive sourcebook, it presents a wide range of documents illustrating religious life in the Roman world - from the foundations of the city in the eighth century BC to the Christian capital more than a thousand years later. Each document is given a full introduction, explanatory notes and bibliography, and acts as a starting point for further discussion. Through paintings, sculptures, coins and inscriptions, as well as literary texts in translation, the book explores the major themes and problems of Roman religion, such as sacrifice, the religious calendar, divination, ritual, and priesthood. Starting from the archaeological traces of the earliest cults of the city, it finishes with a series of texts in which Roman authors themselves reflect on the nature of their own religion, its history, even its funny side. Judaism and Christianity are given full coverage, as important elements in the religious world of the Roman empire.

Prepared by writing center directors, the articles in this book examine the pedagogical theories of tutorial services and relate them to actual center practices. The 19 articles are arranged into three categories: writing center theory, writing center administration, and special concerns. Specific topics discussed in the articles include the following: (1) collaborative learning, (2) writing center research, (3) promoting cognitive development in the writing center, (4) writing centers in the two-year college, (5) developing a peer tutoring program, (6) the handbook as a supplement to a tutor training program, (7) reluctant students, (8) prewriting for the laboratory, (9) meeting the needs of foreign students, (10) tutoring business and technical students, (11) attitudes in writing center relationships, (12) financial responsibility, (13) form design and record management, and (14) undergraduate staffing in the center. A selected bibliography concludes the book. (FL) If you are a professional animator and want to learn to use the Flash environment as a vehicle for your creative work then this is the book for you. It gets you up to speed fast with the basics of how to use Flash MX to animate, so you can start concentrating on how best to translate your animation skills to this medium. The techniques shown throughout the book build up in skill level quickly, showing you clearly and concisely the most effective way to translate your animations into Flash with the focus remaining on the importance of creative animation techniques. Benefit from Sprite Interactive's wealth of tips and tricks from their wide range of professional Flash animation work and successful training courses. Learn how to apply these techniques to your own

work, how to make your characters run in Flash, speed them up and slow them down, make them stumble as they walk, show their anger or fear, make them come to life. Alex Michael, Lead Animator and MD of Sprite Interactive (www.sprite.net), shows you how to achieve all the creative skills of traditional animation using Flash so you can create work for a wide variety of new and innovative platforms, including PocketPCs and interactive TV, as well as video and the web. The free CD includes all the files you need to try everything in the book for yourself, as well as invaluable time and money saving animation processes and tools. Make sure you are at the cutting edge of animation and push your creative skills to the edge, if you want to animate successfully in Flash, buy this book. The series of papers in this publication were commissioned from renowned international economists from all regions. They review the existing empirical literature on six selected themes relating to the economics of intellectual property, identify the key research questions, point out research gaps and explore possible avenues for future research. This book highlights the fact that new syncretisms are being created in Latin America by means of a multicultural encounter with New Age. The analyses of the genesis and the transformations of some of these new hybrid expressions is based on original fieldwork. Biodiversity and Human Health brings together leading thinkers on the global environment and biomedicine to explore the human health consequences of the loss of biological diversity. The Jeu d'Adam is an Anglo-Norman midtwelfth century representation of several biblical stories, including the temptation of Adam and Eve and the

subsequent fall, *Cain and Abel*, and the prophets *Isaiah and Daniel*. This collection of essays explores whether this early play was monastic or secular, its Anglo-Norman character, and the text's musical provenance.⁰ The reauthorization of the U.S. Elementary and Secondary Education Act, referred to as the *Every Student Succeeds Act (ESSA)*, emphasizes evidence-based interventions while giving states and districts new flexibility on the use of federal funds, including funds that could be used to support social and emotional learning (SEL). The authors review recent evidence on U.S.-based SEL interventions for K-12 students to better inform the use of SEL interventions under ESSA. This report discusses the opportunities for supporting SEL under ESSA, the standards of evidence under ESSA, and SEL interventions that meet the standards of evidence and might be eligible for federal funds through ESSA. Federal, state, and district education policymakers can use this report to identify relevant, evidence-based SEL interventions that meet their local needs. A companion volume (available on the website) catalogues these interventions in more detail and outlines the research that has examined them. America has always been a composite of racially blended peoples, never a purely white Anglo-Protestant nation. The Mexican American historian Neil Foley offers a sweeping view of the evolution of Mexican America, from a colonial outpost on Mexico's northern frontier to a twenty-first-century people integral to the nation they have helped build. Digital violence continues to increase, especially during times of crisis. Racism, bullying, ageism, sexism, child pornography, cybercrime, and digital tracking raise critical social and

digital security issues that have lasting effects. Digital violence can cause children to be dragged into crime, create social isolation for the elderly, generate inter-communal conflicts, and increase cyber warfare. A closer study of digital violence and its effects is necessary to develop lasting solutions. The Handbook of Research on Digital Violence and Discrimination Studies introduces the current best practices, laboratory methods, policies, and protocols surrounding international digital violence and discrimination. Covering a range of topics such as abuse and harassment, this major reference work is ideal for researchers, academicians, policymakers, practitioners, professionals, instructors, and students. Child poverty is a central and present part of global life, with hundreds of millions of children around the world enduring tremendous suffering and deprivation of their most basic needs. Despite its long history, research on poverty and development has only relatively recently examined the issue of child poverty as a distinct topic of concern. This book brings together theoretical, methodological and policy-relevant contributions by leading researchers on international child poverty. With a preface from Sir Richard Jolly, Former Assistant Secretary General of the United Nations, it examines how child poverty and well-being are now conceptualized, defined and measured, and presents regional and national level portraits of child poverty around the world, in rich, middle income and poor countries. The book's ultimate objective is to promote and influence policy, action and the research agenda to address one of the world's great ongoing tragedies: child poverty, marginalization and inequality. A Hebrew legend in which a

messenger from God sells himself into slavery in order to help a poor scribe. This meticulously researched compendium provides every aspect of growing, identifying, harvesting, preserving, and using more than 500 species of herbs. Thorough profiles provide a plant's botanical name and family, whether it is an annual or perennial, its height, hardiness, light requirements, water consumption, required soil type, and pH. The often fascinating history of the plant, the chemistry of its essential oils, and its culinary, landscape, and craft uses are also included, as is advice on how to propagate. For the first edition of their work, both authors received The Gertrude B. Foster Award for Excellence in Herbal Literature from the Herb Society of America. This new edition adds important species and includes updated nomenclature. A friend of Galileo and author of the renowned utopia *The City of the Sun*, Tommaso Campanella (Stilo, Calabria, 1568- Paris, 1639) is one of the most significant and original thinkers of the early modern period. His philosophical project centred upon the idea of reconciling Renaissance philosophy with a radical reform of science and society. He produced a complex and articulate synthesis of all fields of knowledge – including magic and astrology. During his early formative years as a Dominican friar, he manifested a restless impatience towards Aristotelian philosophy and its followers. As a reaction, he enthusiastically embraced Bernardino Telesio's view that knowledge could only be acquired through the observation of things themselves, investigated through the senses and based on a correct understanding of the link between words and objects. Campanella's new natural philosophy rested on

the principle that the books written by men needed to be compared with God's infinite book of nature, allowing them to correct the mistakes scattered throughout the human 'copies' which were always imperfect, partial and liable to revisions. It is in the light of these principles that he defended Galileo's right to read the book of nature while denouncing the mistake of those - be they Aristotelian philosophers or theologians - who wanted to stop him from carrying on his natural investigations. However, Campanella maintained that the book of nature, far from being written in mathematical characters, was a living organism in which each natural being was endowed with life and a degree of sensibility that was appropriate for its preservation and propagation. Nature as a whole was an organism in which each single part was directed towards the common good. This is the reason why Campanella thought that nature had to be regarded as an ideal model for any political organisation. Political structures were often ruled by injustice and violence precisely because they had departed from that natural model. This book charts Campanella's intellectual life by showing the origin, development and persistence of some of the fundamental tenets of his thought. Memory construction and national identity are key issues in our societies, as well as it is patriotism. How can we nowadays believe and give sense to traditional narrations that explain the origins of nations and communities? How do these narrations function in a process of globalization? How should we remember the recent past? In the construction of collective memory, no doubt history taught at school plays a fundamental role, as childhood and adolescence are periods

in which the identity seeds flourish vigorously. This book analyses how history is far more than pure historical contents given in a subject matter; it studies the situation of school history in different countries such as the former URSS, United States, Germany, Japan, Spain and Mexico, making sensible comparisons and achieving global conclusions. The empirical part is based on students interviews about school patriotic rituals, very close to the teaching of history, specifically carried out in Argentina but very similar to these rituals in other countries. The author analyzes in which ways that historical knowledge is understood by students and its influence on the construction of patriotism. This book--aside from making a major contribution to the cultural psychology field--should be of direct interest and relevance to all people interested in the ways education succeeds in its variable functions. As a matter of fact, it is related to other IAP books as Contemporary Public Debates Over History Education (Nakou & Barca, 2010) and What Shall We Tell the Children? International Perspectives on School History Textbooks (Foster & Crawford, 2006). In this overview of intellectual and artistic trends from the seventeenth century to the present, Linn unpacks the logic, assumptions, and philosophical implications wrapped up in what has become the founding statement of modern rationalism: Descartes's "I think, therefore I am." --from publisher description. This volume provides comprehensive international coverage of neuropsychological rehabilitation. It contains scientific discussions of dynamic brain changes (genetics, structure, physiology and hormones) plasticity of the central nervous

system, functional reorganization and brain repair in response to treatment in all stages, and emphasizes acute care of early and precise diagnostics. It is intended for clinicians, professionals and students in neuropsychology, health psychology, rehabilitation, behavioral neurology, occupational and physical therapy. Using classic Greek texts and modern theory, Telò forges a new model of tragic aesthetics. "In 1994, from the Lacandon jungle, Zapatista Subcomandante Marcos replied to a ten-year-old girl in Mexico City who had sent him a drawing. In his response, Marcos conjured up a first fable introducing the beetle and knight-errant "Don Durito de la Lacandon." The ensuing output of Durito-related communiques and tales comprise a broad discourse of the Zapatistas' struggle, revealing their organizational history, their critique of traditional politics, and the reasons for their opposition to neoliberalism. These elements have helped make the Zapatistas an exemplary reference in the international movement against capitalist globalization. Conversations with Durito includes all the Durito stories issued to date, translated, annotated, and contextualized by the Accion Zapatista Editorial Collective, and illustrated by simpatico artists. Poetic, humorous, and imaginative, these fables provide an excellent introduction to the politics of globalization from the radical perspective of indigenous struggle."--Publisher's website. The construction of a new Latin library between the end of the Republic and the Augustan Principate was anything but an inhibiting factor. The literary flourishing of the Flavian age shows that awareness of this canon rather stimulated creative tension. In the changing socio-cultural context, daring innovations

transform the genres of poetry and prose. This volume, which collects papers by influential scholars of early Imperial literature, sheds light on the productive dynamics of the ancient genre system and can also offer insightful perspectives to a non-classicist readership. Die tiefe Wirtschaftskrise in Folge der Corona-Pandemie stellt Kubas Sozialismus vor eine ungeahnte Belastungsprobe. Die Regierung in Havanna hat eine grundlegende Reform von Wirtschaft, Institutionengefüge und Sozialsystem auf die Agenda gesetzt. Der Band vereint Beiträge führender internationaler Experten und von der Insel selbst, die aus unterschiedlichen Perspektiven die Herausforderungen analysieren, vor denen Kuba heute steht. Este libro aborda el proceso de inserción de los inmigrantes en Torre Pacheco, Fuente Álamo y la Unión, un factor decisivo en el dinamismo y desarrollo socio-económico de estos municipios murcianos y en su transformación en pueblos multiculturales. Los nuevos vecinos de la Mancomunidad del Sureste nos habla del trabajo inmigrante y la inserción laboral, de dónde y cómo viven los nuevos vecinos y de su inclusión en los servicios públicos y en la vida cotidiana del pueblo. La calle, el mercado y los bares y sitios de ocio, el funcionamiento del tejido asociativo, las instalaciones deportivas y culturales etc. nos muestran las dinámicas que se generan no sin tensiones, desde la convivencia pacífica pero distante a otras más problemáticas. Se destacan las tendencias sociales más generales que la inserción de los inmigrantes está generando que ya conforman los diferentes aspectos de la vida local y que constituyen un factor decisivo de nuestra sociedad de mañana Land use and land cover (LULC) as well

as its changes (LUCC) are an interplay between biogeophysical characteristics of the landscape and climate as well as the complex human interaction including its different patterns of utilization superimposed on the natural vegetation. LULC is a core information layer for a variety of scientific and administrative tasks (e.g. hydrological modelling, climate models, land use planning). In particular in the context of climate change with its impacts on socio-economic, socio-ecologic systems as well as ecosystem services precise information on LULC and LUCC are mandatory baseline datasets required over large areas. Remote sensing can provide such information on different levels of detail and in a homogeneous and reliable way. Hence, LULC mapping can be regarded as a prototype for integrated approaches based on spaceborne and airborne remote sensing techniques combined with field observations. The book provides for the first time a comprehensive view of various LULC activities focusing on European initiatives, such as the LUCAS surveys, the CORINE land covers, the ESA/EU GMES program and its resulting Fast-Track- and Downstream Services, the EU JRC Global Land Cover, the ESA GlobCover project as well as the ESA initiative on Essential Climate Variables. All have and are producing highly appreciated land cover products. The book will cover the operational approaches, but also review current state-of-the-art scientific methodologies and recommendations for this field. It opens the view with best-practice examples that lead to a view that exceeds pure mapping, but to investigate into drivers and causes as well as future projections. Representations of Calcutta are analysed, and the author

shows how the rumours of westerners contribute to the elaboration of an imaginary city. In doing so, they circulate in ways fundamental to the maintenance of international order. Community seed banks first appeared towards the end of the 1980s, established with the support of international and national non-governmental organizations. This book is the first to provide a global review of their development and includes a wide range of case studies. Countries that pioneered various types of community seed banks include Bangladesh, Brazil, Ethiopia, India, Nepal, Nicaragua, the Philippines and Zimbabwe. In the North, a particular type of community seed bank emerged known as a seed-savers network. Such networks were first established in Australia, Canada, the UK and the USA before spreading to other countries. Over time, the number and diversity of seed banks has grown. In Nepal, for example, there are now more than 100 self-described community seed banks whose functions range from pure conservation to commercial seed production. In Brazil, community seed banks operate in various regions of the country. Surprisingly, despite 25 years of history and the rapid growth in number, organizational diversity and geographical coverage of community seed banks, recognition of their roles and contributions has remained scanty. The book reviews their history, evolution, experiences, successes and failures (and reasons why), challenges and prospects. It fills a significant gap in the literature on agricultural biodiversity and conservation, and their contribution to food sovereignty and security. From generation to generation, people experience their landscapes differently. Humans depend on their natural

environment: it shapes their behavior while it is often felt that deities responsible for both natural benefits and natural calamities (such as droughts, famines, floods and landslides) need to be appeased. We presume that, in many societies, lakes, rivers, rocks, mountains, caves and groves were considered sacred. Individual sites and entire landscapes are often associated with divine actions, mythical heroes and etiological myths. Throughout human history, people have also felt the need to monumentalize their sacred landscape. But this is where the similarities end as different societies had very different understandings, beliefs and practices. The aim of this new thematic appraisal is to scrutinize carefully our evidence and rethink our methodologies in a multi-disciplinary approach. More than 30 papers investigate diverse sacred landscapes from the Iberian peninsula and Britain in the west to China in the east. They discuss how to interpret the intricate web of ciphers and symbols in the landscape and how people might have experienced it. We see the role of performance, ritual, orality, textuality and memory in people's sacred landscapes. A diachronic view allows us to study how landscapes were 'rewritten', adapted and redefined in the course of time to suit new cultural, political and religious understandings, not to mention the impact of urbanism on people's understandings. A key question is how was the landscape manipulated, transformed and monumentalized - especially the colossal investments in monumental architecture we see in certain socio-historic contexts or the creation of an alternative humanmade, seemingly 'non-natural' landscape, with perfectly astronomically aligned buildings that define a

cosmological order? Sacred Landscapes therefore aims to analyze the complex links between landscape, 'religiosity' and society, developing a dialectic framework that explores sacred landscapes across the ancient world in a dynamic, holistic, contextual and historical perspective.
