The first comprehensive book on stripbuilding almost any type of small boat Strip-planking is a popular method of amateur boat construction, but until now there has never been a book that showed how to use it for more than one type of boat. Author Nick Schade presents complete plans for three boats of different types (canoe, kayak, and a dinghy) and shows you step-by-step how to build them. Written for all amateur builders, the book covers materials, tools, and safety issues. This compelling nonfiction work takes the reader into a convoluted eight month infiltration of a group of squalid criminals trafficking in wildlife by two undercover game wardens. Latham doesn't hold back on the language in this book nor does he downplay the vile acts that occurred against both the human and wildlife victims in this twisted tale. If you think poachers are just a bunch of good old boys out for a bit of meat, this true story is bound to reshape your opinion. Books written about undercover wildlife trafficking investigations are rare --this one will keep you on the edge of your seat. If you dream of living in a tiny house, or creating a getaway in the backwoods or your backyard, you'll love this gorgeous collection of creative and inspiring ideas for tiny houses, cabins, forts, studios, and other microshelters. Each is displayed in full-color photographs accompanied by commentary by the author. In addition, Diedricksen

includes six sets of building plans by leading designers to help you get started on a microshelter of your own. You'll also find guidelines on building with recycled and salvaged materials, plus techniques for making your small space comfortable and easy to inhabit. Planning algorithms are impacting technical disciplines and industries around the world, including robotics, computer-aided design, manufacturing, computer graphics, aerospace applications, drug design, and protein folding. This coherent and comprehensive book unifies material from several sources, including robotics, control theory, artificial intelligence, and algorithms. The treatment is centered on robot motion planning, but integrates material on planning in discrete spaces. A major part of the book is devoted to planning under uncertainty, including decision theory, Markov decision processes, and information spaces, which are the 'configuration spaces' of all sensor-based planning problems. The last part of the book delves into planning under differential constraints that arise when automating the motions of virtually any mechanical system. This text and reference is intended for students, engineers, and researchers in robotics, artificial intelligence, and control theory as well as computer graphics, algorithms, and computational biology.

First appearing on American highways in the early 1930s, these sleek aluminum icons were compact, cozy spaces that could be hitched to the family car and taken out on the open road – and nearly a century later their timeless design has lost none of its appeal, with the Airstream enjoying renewed popularity among celebrities, event planners and young travelers who appreciate its air of nostalgia and distinctively American blend of functionalism and beauty. Born in the California backyard of inventor Wally Byam and partly inspired by the work of Hawley Bowlus, the famed chief builder of The Spirit of St. Louis, the Airstream's modernist aesthetic has remained relatively unchanged in eight decades, and its industrial durability has earned a reputation without equal, with more than 65% of all Airstreams still on the road today. The book features the complete history of the Airstream, tips, cool facts, quotes and fabulous photographs—a fitting tribute to a true American legend.
