"A must-read book that explores a

vital pre-war effort [with] deep research and gripping writing.” —Washington Times In The rise of the G.I. Army, 1940-1941, Paul Dickson tells the dramatic story of how the American Army was mobilized from scattered outposts two years before Pearl Harbor into the disciplined and mobile fighting force that helped win World War II. In September 1939, when Nazi Germany invaded Poland and initiated World War II, America had strong isolationist leanings. The US Army stood at fewer than 200,000 men—unprepared to defend the country, much less carry the fight to Europe and the Far East. And yet, less than a year after Pearl Harbor, the

American army led the Allied invasion of North Africa, beginning the campaign that would defeat Germany, and the Navy and Marines were fully engaged with Japan in the Pacific. Dickson chronicles this transformation from Franklin Roosevelt’s selection of George C. Marshall to be Army Chief of Staff to the remarkable peacetime draft of 1940 and the massive and unprecedented mock battles in Tennessee, Louisiana, and the Carolinas by which the skill and spirit of the Army were forged and out of which iconic leaders like Eisenhower, Bradley, and Clark emerged. The narrative unfolds against a backdrop of political and cultural isolationist

resistance and racial tension at home, and the increasingly perceived threat of attack from both Germany and Japan. The celebrated writer reminisces about his boyhood in Michigan at the turn of the century. "You gonna leave here a warriah, a trained killah! Gonna come a time when you life gonna depend on it, so pay attenthun!" June 25, 1950: North Korean armed forces, supported by the Soviet Union and China, drive deep into the heart of South Korea. They are met by the United States' First Marine Division, and a draft is instituted back home. Able-bodied young men enrolled in college for "critical skills" receive temporary deferment;

upon graduation they are obliged to serve a six-year term. July 27, 1953: An uneasy armistice is signed. The Cold War has suddenly gotten much hotter, and the draft remains in full effect. Two years later, a crop of college graduates in engineering and the sciences arrive at Fort Dix, New Jersey, for basic training and the start of their service with the Scientific and Professional Detachment. Author Joseph N. Manfredi's *The Trained Killers* brings us the story of the troops of the S&P Detachment as they serve their country and the conflicting demands of their twin gods—science and the military—with dignity, wit, and verve. In his humorous,

true-to-life style, Manfredi recounts the lab work with rockets and explosives ... and the night furnace duty, Kitchen Police, and specially designed work details. October 4, 1957: Russians launch Sputnik. The honor and challenge of spurring on American technological advance falls to the engineers, scientists, and scullions of the S&P Detachment, uniquely equipped as they are for the days ahead. As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. *Retooling for an Aging America*

calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use *Retooling for an Aging America* to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older

adults. Health care professional and occupational groups can use it to improve the quality of health care jobs. Offers advice on bringing home a new puppy including advanced preparations, grooming, and visits to the veterinarian. "The groundbreaking investigative story of how three successive presidents and their military commanders deceived the public year after year about the longest war in American history"-- The first comprehensive survey and study of the major techniques developed by and for the American actor over the past 60 years. Presented side-by-side, each of the 10 disciplines included is described in detail

by one of today's foremost practitioners. An invaluable resource both for the young actor embarking on a career and for the theatre professional polishing his or her craft. "successful acting must reflect a society's current beliefs. The men and women who developed each new technique were convinced that previous methods were not equal to the full challenges of their time and place, and the techniques in this book have been adapted to current needs in order to continue to be successful methods for training actors. The actor's journey is an individual one, and the actor seeks a form, or a variety of forms, of training that will

assist in unlocking his own creative gifts of expression." Rehearsing war: behind the scenes of the US military forces "This book gives and introduction to the U.S. legal system for foreign lawyers. It covers a broad range of topics that will help foreign lawyers develop a baseline understanding of the legal system through chapters on: American legal history, the trial process, and an overview of the U.S government"-- The Bicycling Big Book of Training is an encouraging, focused training book that will speak to beginner and intermediate cyclists without making them feel like novices. It covers all the information the reader

needs to begin an effective training regimen. The book is divided into five sections that are then broken into miniguides for various cycling training disciplines. Cyclists will learn about how the body becomes fit and how that fitness translates to on-the-bike performance, while discovering the components of a successful training plan, including nutrition. Furthermore, riding disciplines such as road racing, endurance events, cyclocross, mountain biking, and track are discussed at length so readers can figure out which activities are right for them. The *Bicycling Big Book of Training* is an excellent guide for anyone who wants to learn more about

cycling and take their performance to the next level. The American Society of Clinical Oncology (ASCO) predicts that by 2020, there will be an 81 percent increase in people living with or surviving cancer, but only a 14 percent increase in the number of practicing oncologists. As a result, there may be too few oncologists to meet the population's need for cancer care. To help address the challenges in overcoming this potential crisis of cancer care, the National Cancer Policy Forum of the Institute of Medicine (IOM) convened the workshop *Ensuring Quality Cancer Care through the Oncology Workforce*:

Sustaining Care in the 21st Century in Washington, DC on October 20 and 21, 2008. A seventeen-volume compilation of selected AEF records gathered by Army historians during the interwar years. This collection in no way represents an exhaustive record of the Army's months in France, but it is certainly worthy of serious consideration and thoughtful review by students of military history and strategy and will serve as a useful jumping off point for any earnest scholarship on the war. --from Foreword by William A Stofft. An analytical study was conducted to define desired functional characteristics of modern, synthetic flight training equipment for the purpose of producing potentially better qualified aviators through a combination of aircraft and simulator training. Relevant training which aviators receive in preparation for specific aircraft duties and training

requirements for Coast Guard aviation are discussed. To meet these objectives, a comprehensive study of aviator requirements during operational missions was undertaken. The search and rescue (SAR) mission was chosen for the analysis, and missions were chosen to represent operations in each of the four aircraft used by the Coast Guard primarily for the SAR. The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education:

A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health

professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

Even as new scientific breakthroughs are announced, though, many cancer patients may be getting the wrong care, too little care, or too much care, in the form of unnecessary procedures. How close is American medicine to the ideal of quality cancer care for every person with cancer? Ensuring Quality Cancer Care provides a comprehensive picture of how cancer care is delivered in our nation, from early detection to end-of-life issues. The National Cancer Policy Board defines quality

care and recommends how to monitor, measure, and extend quality care to all people with cancer. Approaches to accountability in health care are reviewed. What keeps people from getting care? The book explains how lack of medical coverage, social and economic status, patient beliefs, physician decision-making, and other factors can stand between the patient and

the best possible care. The board explores how cancer care is shaped by the current focus on evidence-based medicine, the widespread adoption of managed care, where services are provided, and who provides care. Specific shortfalls in the care of breast and prostate cancer are identified. A status report on health services research is

included. Ensuring Quality Cancer Care offers wide-ranging data and information in clear context. As the baby boomers approach the years when most cancer occurs, this timely volume will be of special interest to health policy makers, public and private healthcare purchasers, medical professionals, patient advocates, researchers, and people with cancer.
